The Minnesota Starvation Experiment, also known as the Minnesota Semi-Starvation Experiment, the Minnesota Starvation-Recovery Experiment and the Starvation Study, was a clinical study performed at the University of Minnesota between November 19, 1944 and December 20, 1945. The investigation was designed to determine the physiological and psychological effects of severe and prolonged dietary ...

Minnesota Starvation Experiment - Wikipedia

The Covid-19 pandemic has put financial regulators in unchartered waters. While the immediate response has been to postpone timelines for two-thirds of regulatory initiatives to free up resources, managing the aftermath of the pandemic will likely call for more, not less, regulatory oversight.

The aftermath of Covid-19 is likely to result in greater ...

In scientific research and psychotherapy, the subject-expectancy effect, is a form of reactivity that occurs when a research subject expects a given result and therefore unconsciously affects the outcome, or reports the expected result. Because this effect can significantly bias the results of experiments (especially on human subjects), double-blind methodology is used to eliminate the effect.

Subject-expectancy effect - Wikipedia

Effects of the orexin receptor antagonist suvorexant on respiration during sleep in healthy subjects. ... The maximum approved dose in the United States and Japan is 20 mg. We evaluated suvorexant effects on respiration during sleep in a randomized, double-blind, 3-period crossover study of healthy adult men (n = 8) and women (n = 4) ≤ 50 ...

Background & aims: Patients with non-celiac gluten sensitivity (NCGS) do not have celiac disease but their symptoms improve when they are placed on gluten-free diets. We investigated the specific effects of gluten after dietary reduction of fermentable, poorly absorbed, short-chain carbohydrates (fermentable, oligo-, di-, monosaccharides, and polyols [FODMAPs]) in subjects believed to have NCGS.

No effects of gluten in patients with self-reported non ...
