In statistics, point estimation involves the use of sample data to calculate a single value (known as a point estimate since it identifies a point in some parameter space) which is to serve as a "best guess" or "best estimate" of an unknown population parameter (for example, the population mean). More formally, it is the application of a point estimator to the data to obtain a point estimate.

Bickel & Doksum can be difficult. Students often ask for recommended "companion textbooks". I strongly recommend Rice, Mathematical Statistics and Data Analysis, 2007-- this is the textbook we use for 550.430! For a more thorough treatment of many B&D topics, see Lehmann's two volumes: Theory of Point Estimation and Testing Statistical Hypotheses.
