selects `product_name` as the product to build, and `build_variant` as the variant to build, and stores those selections in the environment to be read by subsequent invocations of `m` and other similar commands. The exact configuration can be passed as an argument.

Building Android | Android Open Source Project

When you're building standalone apps with Turtle CLI, the build process is happening on your local machine. Turtle CLI makes use of exactly the same codebase which is running on our servers (`expo build:[ios|android]` command). This means you're required to publish your app to Expo's servers or host it on your own server prior to building it with Turtle CLI.
