Fuzzy Logic Systems Control Systems

Fuzzy Logic is a logic or control system of an n-valued logic system which uses the degrees of state “degrees of truth” of the inputs and produces outputs which depend on the states of the inputs and rate of change of these states (rather than the usual “true or false” (1 or 0), Low or High Boolean logic (Binary) on which the modern computer is based).

What is Fuzzy Logic System - Operation, Examples ...

A fuzzy control system is a control system based on fuzzy logic—a mathematical system that analyzes analog input values in terms of logical variables that take on continuous values between 0 and 1, in contrast to classical or digital logic, which operates on discrete values of either 1 or 0 (true or false, respectively).

Fuzzy control system - Wikipedia

Fuzzy logic is applied with great success in various control application. Almost all the consumer products have fuzzy control. Some of the examples include controlling your room temperature with the help of air-conditioner, anti-braking system used in vehicles, control on traffic lights, washing machines, large economic systems, etc.

Fuzzy Logic - Control System - Tutorialspoint

Fuzzy logic control (FLC) techniques usually decompose a complex system into several subsystems according to the human experts’ knowledge about the system. Meanwhile, a set of simple and straightforward control laws are used to emulate the human control strategy in each local operating region [6~8].

Fuzzy-Logic Control - an overview | ScienceDirect Topics

The fuzzy logic system controls the amount of energy expended while the thrust is maintained to a maximum value. This maximum value of thrust is in the same range as the electrostatic and electrothermal thrusters [10].

Fuzzy Logic System - an overview | ScienceDirect Topics

Fuzzy logic Systems can take imprecise, distorted, noisy input information. FLSs are easy to construct and understand. Fuzzy logic is a solution to complex problems in all fields of life, including medicine, as it resembles human reasoning and decision making.
