When using if , else if , else statements there are few points to keep in mind. An if can have zero or one else's and it must come after any else if's. An if can have zero to many else if's and they must come before the else.

C++ if...else statement - Tutorialspoint
In this tutorial, we will learn the use of while and do...while loops in C++ programming with the help of some examples. In computer programming, loops are used to repeat a block of code. For example, let's say we want to show a message 100 times. Then instead of writing the print statement 100 times, we can use a loop.
