pumps or motors. When used as a pump, the flow is proportional to the input speed and the swashplate angle. If the unit is used as a motor, the output speed is proportional to the flow through the unit.

Axial piston pumps are widely used throughout the mobile and industrial sectors. They are generally the pump of choice for flows over 5L/min and up to 415 bar, if budgets allow. In general, the swash plate design is used for pumps and the bent axis design for motors although there are applications where this is not the best solution.

Axial piston pumps and motors by Liebherr 11 Controls Each nominal size can be equipped with a variety of controls, such as electric-proportional, pressure cut-off, load sensing, speed-dependent or torque controls. Safety valves in poppet valve design can cut-off the control pressure and centre the axial piston unit in this way.
