For example, when two chlorine atoms form a chlorine molecule, they share one pair of electrons: The Lewis structure indicates that each Cl atom has three pairs of electrons that are not used in bonding (called lone pairs) and one shared pair of electrons (written between the atoms).

6.2 Lewis Structures | Introductory Chemistry

The questions on the Lewis Structure Worksheet with Answers are known as problem-solving questions. This is so the child will know how to determine the correct answer to the problems that they will be solving. This is important because a child can learn from the errors that they make in their early years.
