The CV joints might be worn and need a new boot or even replacement of the entire part. Or it could also be your motor mounts. The motor mounts could be worn and your engine isn't well secured to the crossmember, causing the clunking sound. Have these parts checked, too. Continue reading below ↓.

Why is there a clunking noise when I shift from park to ...

I think it's a characteristic of the IRS or driveshaft. The pre-2015 Mustangs didn't do this, but every Mustang I've driven that was made after 2015 has that clunk noise. The sound doesn't change between cars with the MT-82 and Tremec boxes.

Transmission thud/clunk | 2015+ S550 Mustang Forum (GT ...

The shifter may help transmit the transmission noise through the body by the way it is mounted, but if it was the shifter itself, you would be able to hear it with the car at a standstill too. My clunk happens during a shift and sounds like gears coming to a halt, having some slack like a not so perfect meshing of gears or something.
