Igneous rock (derived from the Latin word ignis meaning fire), or magmatic rock, is one of the three main rock types, the others being sedimentary and metamorphic. Igneous rock is formed through the cooling and solidification of magma or lava. The magma can be derived from partial melts of existing rocks in either a planet's mantle or crust. Typically, the melting is caused by one or more of ...

Essentials of Igneous and Metamorphic Petrology

Igneous rocks comprise about 95% of the total earth's crust. All other types of rocks viz., sedimentary and metamorphic, originate from igneous rocks, and, therefore, they are also called primary rocks. There are many types of igneous rocks. Each kind of igneous rocks contains different minerals and has different structures.
