The software erector set. CompileIt! Manual - This is a PDF of the manual to CompileIt!, a HyperCard stack that allows you to write HyperCard command plug-ins that access the Mac's system API and let you do everything any Mac programmer could do.; HyperTalk Reference - This is a PDF containing screen shots of most of the pages of the HyperTalk Reference stack that came with HyperCard 2.4.

HyperCard | The software erector set.

System programmers are needed to install and maintain the middleware on the mainframe, such as database management systems, online transaction processing systems and Web servers. Middleware is a software "layer" between the operating system and the end user or end user application.

Who is the system programmer?

The language is statement oriented. The source is free-form and may be arranged for programming convenience. Data types include fixed-point, floating-point, boolean, character and status. Direct reference to, and manipulation of character and bit strings is permitted. Symbolic machine code may be included, known as direct code.

CMS-2 (programming language) - Wikipedia

The variables in Java are classified into primitive and reference type variables. From the programmer's point of view, the data in a primitive variable is stored as the value of that variable, whereas the value of a reference type variable is a reference to the data. Reference type variables are practically always object in Java.
