The petroleum ether extract was subjected to thin layer chromatography about 0.1-0.2 ml of conc. Methanolic extract was loaded on the plate by using capillary tube. During spotted plates were carefully dried and used for elution purpose. Initially various solvents such as benzene, pet ether, chloroform ethanol were tested alone.

Thin-layer chromatography (TLC) is a chromatography technique used to separate non-volatile mixtures. Thin-layer chromatography is performed on a sheet of glass, plastic, or aluminium foil, which is coated with a thin layer of adsorbent material, usually silica gel, aluminium oxide (alumina), or cellulose.

Thin-layer chromatography - Wikipedia

Thin-Layer Chromatography Following their separation on a celite column, Phaseolus I and II were rechromatographed using five different thin-layer chromatogram solvent systems (see Table 2). In all five, both Phaseolus I and Phaseolus II had mobilities that were either equivalent to or only slightly more polar than the mobilities of ...
