Environmental Engineering: Drinking Water Treatment | edX

Water quality engineering addresses the sources, transport, and treatment of chemical and microbiological contaminants that affect water. Our objective is the treatment of wastewater so that the treated wastewater can meet national effluent standards for the protection of the environment and the protection of public health.

Water | Special Issue : Water Quality Engineering and ...

Water Quality Engineering. Traditionally, water systems research has focused on water and wastewater treatment. While these remain vibrant areas for study, access to water is increasingly affecting many industrial sectors: manufacturing, transportation, agriculture, mining, and energy production. An integrated understanding is needed of how industrial and treatment systems interact with natural processes, cycles, and systems, and managed systems (e.g., wetlands and rivers).
