In other words: ISO 13920 codifies exactly what happened before ISO 13920 existed. Basically "Line 'er up as best you can and weld the sucker" So in effect specifying "Tolerances per ISO 13920" is functionally the same as specifying no tolerances at all. It just makes you feel good because "I called out a standard."

As an alternative to the functional tolerances in Annex B, BS EN 1090-2 does allow the use of BS EN ISO 13920; this is more likely to be used in cases of heavily welded structures where distortion from welding is the dominant factor in determining the dimensions and shape. That standard specifies general tolerances for linear and angular dimensions and for shape and position of welded structures.
